

Bureau of Reclamation.

In 1920 the Heber Plant on the
Provo River was rebuilt and
connected to the Heber Power & Light
system. For fifteen years this plant
was operated with very little trouble
from ice, and none from rocks.
When freezing weather started, the
screens were pulled up and were
not put back until the spring
run-off started. In 1945 the
Bureau of Reclamation started
dredging the river to carry
wheeler and Duchesne water. From
1945 to the present time we have
been in continuous trouble.

From 1945, ice jams and snags
were unheard of. Since that time we
have had several ice jams that have
flooded the dam out, filled the forebay
with ~~tons~~ rock and brush, and tons of
rock entered the pipeline, which has
been a continuous source of trouble to the
present time. Much of this rock is
still in the line, and from time to time
comes loose and plugs the water wheels
and gates. If a rock happens to be in
the gate when the governor calls for
a shut down, it means a runaway,
which has happened ~~more than~~ several
times.

The Bureau of Reclamation and the
water users were aware of the damage.
The river was causing, but still
continued to dredge and put more
water in the channel than it was
capable of carrying. The water users
personnel said all they had to do was
get the water, and their lawyers would
take care of the rest. The water users
helped clean the channel above the
forebay a couple of times, when it was
impossible to get the water through.

The additional water from the
Duchaine and Weber, set the banks
of the Tervo River to such an extent,
that a great many more trees, brush
and acres of sod were cut loose
and made it almost impossible
to keep a constant flow of water in
our pipe line.

July 30, 1951 - Coils burned in #1
Feb. 15, 1952 Coils burned in #2
Nov. 7, 1952 Coils burned in #1
Jan. 12, 1946 Coils burned in #2
May 10, 1941 - #1 Burned - New winding)
July 5, 1942 - #2 Burned - New winding
Feb. 3, 1942 #2 Runner repaired. Emco.

1953 - Operation shows what the plant will
do when the river bed was not molested
the fall before.

1946 - Nov. 5 - Bureau of Rev. cleaned pond with cut.
1950 - Nov. 11 - New shaft in #1

1944 - Crook - Moulton Horner, Bruner to April
1945 - Horner - Moulton, Thacker, Crook
1946 - Horner - Thacker - Moulton, Crook

1950 - Ralph Giles, Grant Giles, Moulton - Ryan.

1954

No major trouble, other than rocks in the gate, was caused until September 16th when the Bureau of Reclamation or Water Users began dredging the river.

Loss of power and extra labor to clean screens, and machines. \$500.00

1955

May - 16000 K.W.H. @ .6¢ ——— \$96.00
 125 K.W. @ \$1.60 on Water Power 200.00
 Extra Labor cleaning screens & Machines 1.00
\$297.00

June. 69200 K.W.H. @ .6¢ ——— 415.20
 600 K.W. on peak @ 1.60 ——— 960.
 Labor ——— 300
\$1675.20

Rocks washed in Forebay continued to cause trouble during July, August, & Sept. Hard to estimate actual damage.

October

25th Water users working in river, Both machines off because of trash.
~~485 K.W. @ \$1.60 ——— \$776.00~~

November

5th Both machines off line because of trash.

485 K.W. @ \$1.60 ——— \$776.00
 Labor cleaning screens & Machines - 100.00

1955

Dec.

23rd River loaded with trash.
~~Both~~ machines off but not on peak.

1956

From Feb. 1 to 9th the plant was shut down most of the time; due to mush ice and brush.

The tail race was blocked solid from the plant to the Provo River. This had to be blasted with powder in order to get the water through. At the same time the inside of the plant was flooded by water and mush ice. The mush ice being six ft deep in the east end of plant.

The bottom two feet of the generator was flooded with water. On April 4th No. 1 generator burned out several coils, which were in the flooded area.

Damage for Feb

98000 K.W.H @ .6¢	588.00
600 K.W. @ \$1.60 on peak	960.00
48 days labor @ \$16.00 (line crew)	768.00
Heber City Employees	171.40
100 Gall fuel oil	14.00
2 Oil Burners	42.00
100 lbs of Powder & Caps	34.00
	<hr/> \$2575.40

The day of this trouble - H.C. Clegg and Sherman Siles, inspected the Provo River and Weber Canal, and found that the mush ice was coming from the Weber Canal. The Provo River was clear.

1956.

- 3rd Screens plugged with trash.
 5th River full of trash

During May and June it was
necessary to hire extra help to keep
trees out of Fairway.
Cost of labor _____ \$500.00

July 3rd

Water cut off from Weber without
notice.

300 K.H. @ 1.60	_____	\$480.00
21600 K.H. @ .44	_____	129.00
		<hr/> 609.00

High water in spring of 1956 and
1957 cut new concrete dams down
to reinforcing steel. Rocks coming
through acted like a ball mill on
the concrete.

Dams built new in Nov. 1954 at
a cost of \$5000.00

Upper end of settling pond is
now filled with rocks and trees.
This diverted the water around the
north bank, which kept most
of the rocks out of the Fairway.
